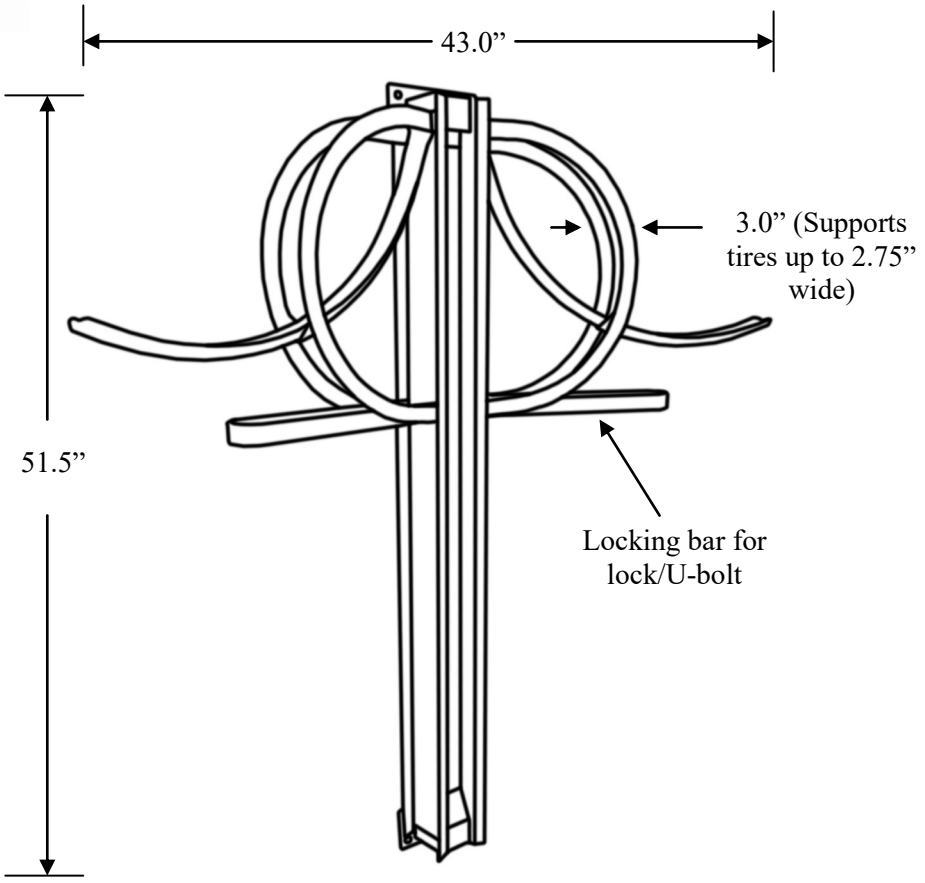
DOUBLE WALL UNIT
VERTICAL BIKE RACK
Item #101

Two bike capacity, powder coated, wall mounted bike rack

MATERIAL:
The Double Wall Unit Vertical Bike Rack is completely fabricated from steel for durability. The bike holders are constructed from custom bent 10 gauge 3x1" channel iron, while the locking bar and tire guards are constructed from custom bent 1x1/4" steel.

FINISH:
All bike racks are powder coated our standard black color for a durable, long lasting finish.

ASSEMBLY:
Fasten the bottom bracket in place on the wall at a height of 16" (bottom of bracket) from the floor. Once the bottom bracket is installed on the wall, insert the two bike holders into the bottom tabs, and then while holding them in place at the top, slide the top bracket over the tops of the bike holders, and fasten the top bracket in place on the wall. Drill in the two provided steel screws in the holes on the top bracket to complete installation . For more details, see "Double Wall Unit Installation Guide".


MAINTENANCE:
The racks are virtually maintenance free and require no upkeep, other than periodic cleaning with a rag and water to remove any surface dirt.
