

MATERIAL:

The Steel Bollards are completely fabricated from steel for durability. After construction, the bollards are sandblasted and powder coated to a variety of colors. The Bollards are available for order in three different styles: 1. Flush Mount (post with a small circular plate for mounting to a concrete surface), 2. In Ground Stationary (50" long pipe for installation directly in concrete), or 3. Removable. The Removable Bollard comes with an 18" long sleeve post that must be set in concrete in the ground.

FINISH:

All bollards are sandblasted and powder coated for a durable, long lasting finish. Standard powder coating colors include black or white. An additional color change fee will apply for other colors. Bottom sleeves are typically painted grey for the removable bollards unless otherwise specified.

ASSEMBLY:

The bollards require no assembly other than bolting down to a concrete surface if using a flush mounted bollard. If installing a removable bollard, refer to the MMCD Standard detail drawing on our website.

MAINTENANCE:

The bollards are virtually maintenance free and require no upkeep, other than periodic cleaning with a rag and water to remove any surface dirt.

**4" STEEL BOLLARD
REMOVABLE RESTRICTION POST**

Item #402

Sandblasted and powder coated steel bollard. Removable with Sleeve, Flush Mount, or In-Ground Stationary styles available.
